Arteria iliaca communis'e optimum yaklaşım için ekartör.

Bleydleri titanyumdan yapılmıştır ve bu sebeple x ışını geçirgendir. Büyük ekartör bleydi operasyon esnasında kademeli olarak ayarlanabilir. Ekartör bleydlerin kolaylıkla değiştirilebiliyor olması ekartör sisteminin sağ taraftan ve sol taraftan kullanımını sağlar.

Retractor system for optimal approach to the arteria iliaca communis.

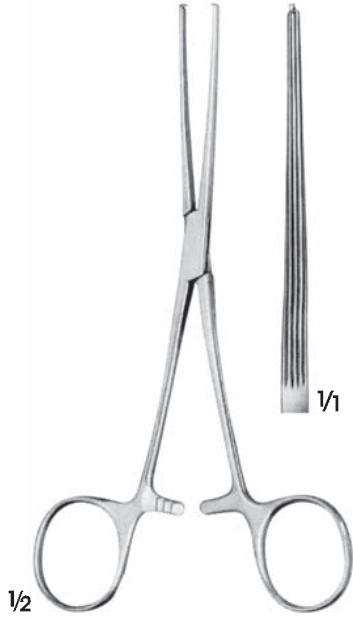

The retractor blades are made out of titanium and therefore they are radiotransparent. The big medial retractor blade can be gradually adjusted during the operation. Because of the blades which are easy to exchange the retractor system can be used for the left and the right side.

- İki adet hemostatik veya ligatür pens yardımı ile sünnet derisi çan şeklindeki koruma çubuğu üzerine çekilir ve glans yuvaya yerleştirilir.
 - Bu şekilde, kelebek somun sıkılarak, olabildiğince kapama sağlanır. Böylelikle sünnet derisi halka şeklinde sıkıştırılır. Sünnet derisi bistüri yardımı ile sıkma çemberinin hemen kenarından kesilir.
 - Sünnet çanı kanamayı önlemek amacı ile bir kaç dakika bekletilir. Özellikle frenular arter damarının büyük olması ve kesilmesi gerektiği durumlarda dikiş takımı hazır bulundurulmalıdır.
 - Tanımlanan metodun avantajı, küçük ölçü dokunun bıraktığı yara izinin estetik olarak uygun olmasıdır.
-
- Foreskin is pushed over the bell-shaped protection rod with the help of two hemostatic or ligature forceps and the glans is placed into cavity on the rod.
 - In this position, wing nut is tightened as close as possible for guaranteeing annular copression on the foreskin. Then foreskin is cut off with scalpel, right next to the compression ring.
 - The circumcision clamp is kept in compressed position for few minutes for avoiding bleeding. In case of large vein of frenular artery is cut artery is cut through, the ligature set should be kept ready.
 - The advantage of the method described is aesthetically favorable scar after operation.

Çalışması :

Arzu edilen (ihtiyaç duyulan) vakum miktarı ayarlama vidası ile sürekli olarak istenilen değere ayarlanabilir. Vakum oluştuğunda bu vakumun emme kafalarına uygulanması için hızlı-kesme düğmesinin sağa veya sola basılması ile sağlanır. Ayarlanan vakum değeri vakum ayar vidası ile değiştirilebilir. Emme işleminin aniden durdurulması isteniyorsa hızlı-kesme düğmesi kapatılır. Böylece emme kafasına gelen vakum kesilmiş ve emme kavanozuna akış durdurulmuş olur.

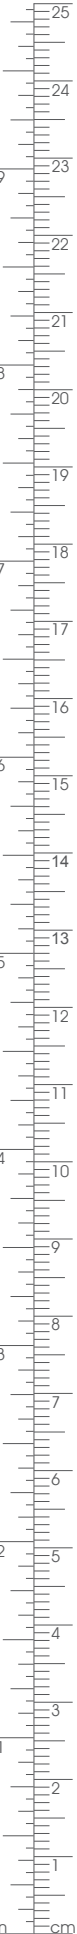

Function:

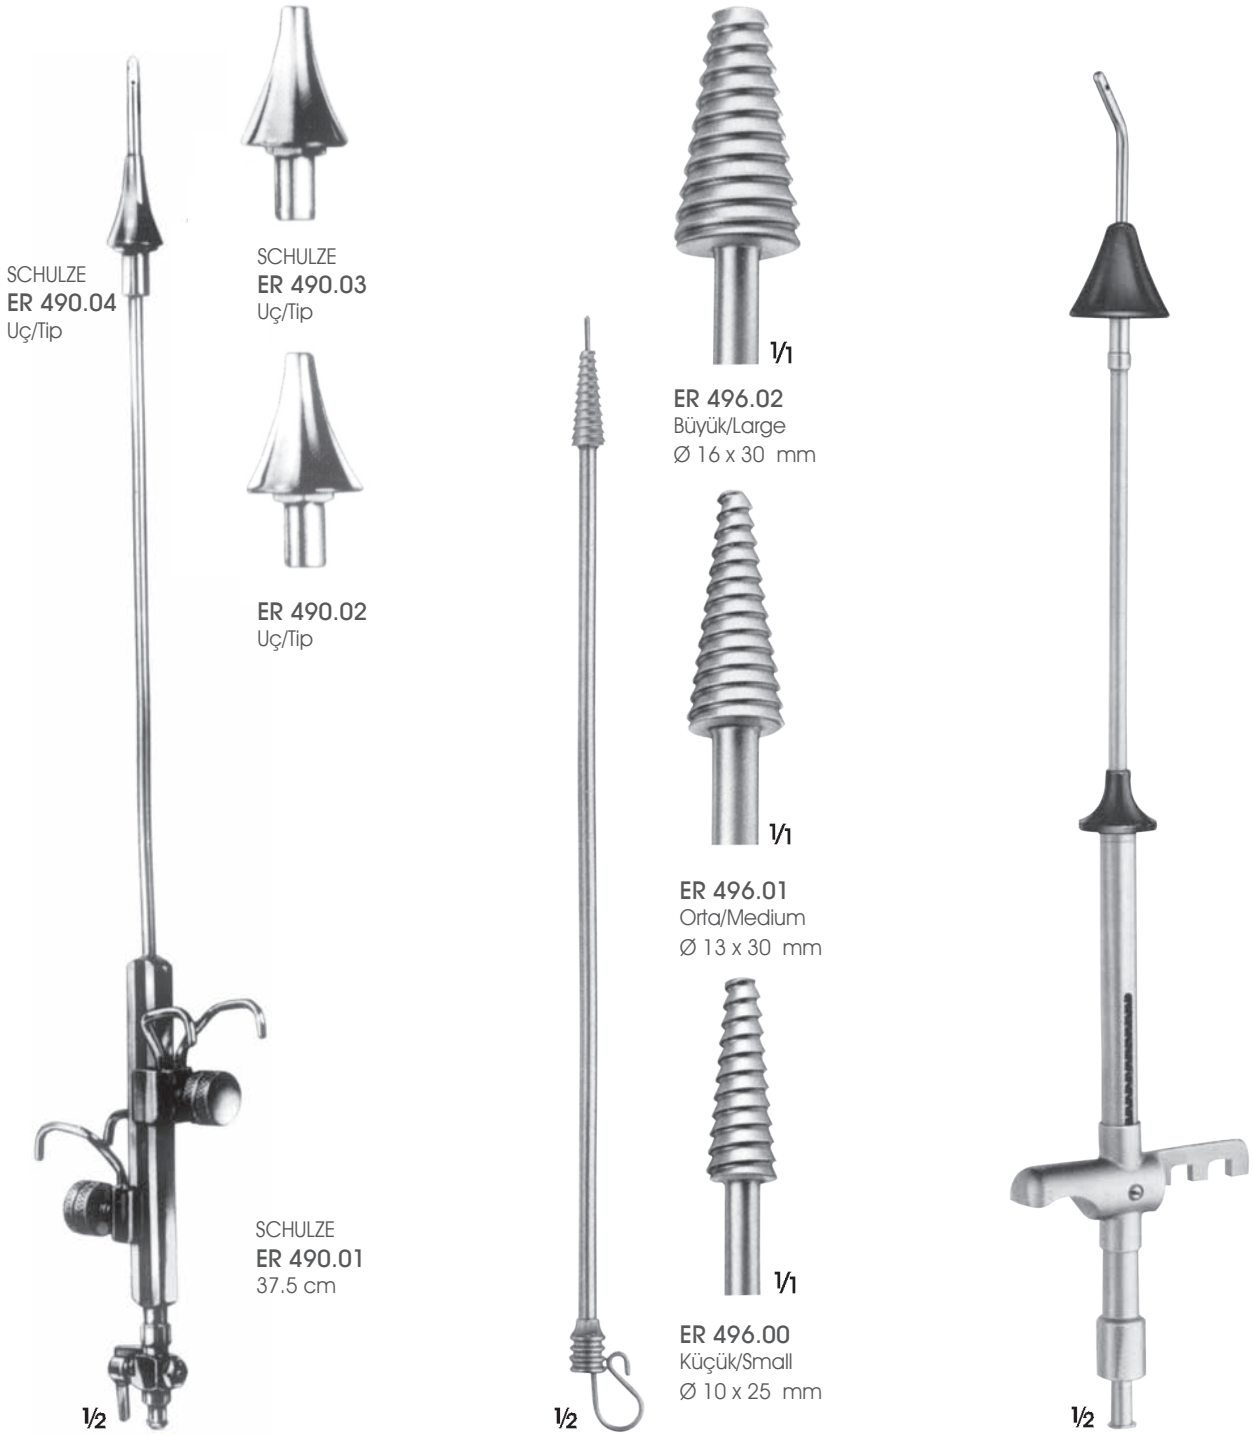

The vacuum required can be constantly preset by the adjusting screw. This vacuum exists then up to the closed quick-shutter, thus the vacuum in the suction head is pressed from the left to the right, the nounted suction head is immediately put under the preset vacuum. In case the preset vacuum has to be changed, this can be done with the adjusting screw. For immediate removal of the suction head simply close the quick-shutter, thus the vacuum in the suction head is eliminated at once whereas the vacuum in the suction jar remains unchanged.

Buldog pens sürücüsü, ince ve hafif eğri yapısı ile tünel boyunca kolay ilerleme sağlar.
Buldog pensini güvenli şekilde kavrar.

The slight curvature of the introducer forceps permits handling during tunneling. Here the prosthesis can be drawn in by applying the introducer forceps directly to the prosthesis (alloplastic prosthesis) or can be drawn in by means of the bullog clamp (autologous/homologous prosthesis). Thanks to the interlocking fit, the bulldog clamp rests non-displaceable and securely in the mouth of the introducer forceps.
